ACCESIBILITY

Web accessibility refers to the ability to access the web and its contents. When talking about Web accessibility, we refer to a Web design that will allow people to perceive, understand, navigate and interact with the Web, while also providing content. Web Accessibility encompasses many types of challenges including visual, auditory, physical, cognitive, neurological and speech.

Solar Innova is a priority for all people, regardless of disability, age or the technology used to browse the web pages of your Company without experiencing access difficulties.

Development of Solar Innova site is based on compliance with the Accessibility Guidelines 1.0 Web Content provided by the W3C (World Wide Consortium Web).

To have easy access to the contents of the website, Solar Innova define the visual characteristics such as:

√ Type and Font size.
√ Font color and background, etc., Are defined by the style sheet so that the user can adjust the text to your preferences.

These parameters are defined by the style sheet so that the user can adjust the text to your preferences.

In case your browser or browsing device does not support style sheets, the content of the Web is still completely readable, since you can access all the content with CSS disabled.

The web pages have a clear structure for the user who can see the content, and for those who read the information with a screen reader, users that disable the style sheet, and so on. With this goal as primary, defined by HTML section headings, lists, and all the elements that help the overall understanding of the site.

The HTML and CSS employee meets formal grammar for the correct display of content in different browsers.
